

# WESTERN EXCELSIOR DOCUMENTATION UPDATED

## ALL NEW TECHNICAL INFORMATION NOW AVAILABLE

Release Date: 9/13/06

Western Excelsior is dedicated to continuous research to ensure the highest level of product performance. Over the past two years, all Western Excelsior products have been evaluated utilizing state of the practice methodologies.

In addition to providing design required thresholds, performance testing provides the highest level of quality assurance, where the raindrops meet the slope. Each product has been evaluated to determine performance thresholds as slope protection and as a channel liner. Both vegetated and unvegetated conditions were examined. The results indicated Western Excelsior products exhibit outstanding performance and the highest possible quality.

Performance documentation is now available through [westernexcelsior.com](http://westernexcelsior.com). Each document provides all relevant information to quantify the performance of the product. Further, performance variables are provided specifically to be incorporated with state of the art design methodologies.

In addition to new performance documentation, certificates of conformance have all been updated as well as product specification and installation documents. Certificates of conformance are now provided for every product to confirm the properties of the material. Specification documents are available listing the weights, dimensions and physical

properties of the material. Finally, installation documents are provided for both slope and channelized applications. Installation documents are now available in \*.pdf format and \*.dwg format. Continue to visit [westernexcelsior.com](http://westernexcelsior.com) to remain updated on Western Excelsior products and the state of the industry.

### **Western Excelsior Provides:**

**Quality** - Assurance each roll meets the manufacturer's stated specifications.

**Expertise** - The knowledge and experience standing behind each yard purchased, ensuring the material performs as intended.
