

WESTERNEXCESLIOR.COM Upgraded – Mulch Products Added to Website

11/29/2005

For Immediate Release

Western Excelsior is committed to continuously improving the support of its distributor network by maintaining a document/information database that allows each distributor instant access to Western Excelsior material specifications, installation instructions and performance data. As the state of the practice evolves, new technologies emerge and new information becomes available, Western Excelsior updates its distributors, customers and specifiers through WESTERNEXCESLIOR.COM.

Western Excelsior manufactures two mulch products intended to be hydraulically applied. 100% Aspen Fiber Mulch consists entirely of wood fibers. Aspen Turbo Mulch is a 50%/50% blend of aspen wood fibers and recycled cellulose material. Both products are applied to aid in the re-vegetation of shallow slopes or flat ground surface. Providing a mulching layer and a minimum of erosion control, 100% Aspen Mulch and Aspen Turbo Mulch represent flexible and economical products for the erosion control professional. Specifications for each product are now available at WESTERNEXCESLIOR.COM through the Products Page.
